

## **Showcasing coolant-saving innovation at Manufacturing Solutions 2019**

If you had to name some of the top concerns for manufacturers right now, cutting costs, reducing waste and decreasing environmental impact would probably be at the top of the list. A solution which enables companies to achieve all of these in one is set to be showcased at the Manufacturing Solutions 2019 conference in Limerick, Ireland on 12<sup>th</sup> June. Industry innovators, Wogaard, will be demonstrating their award-winning Coolant Saver technology at the popular event.

Delegates will be able to view a working model of Wogaard's Coolant Saver device and see first-hand how it reclaims fresh coolant rather than allowing it to be carried off with waste materials. Not only does the technology provide up to 50% coolant savings and up to 90% coolant disposal savings, it also enables companies to better address their environmental responsibilities by reducing their carbon footprint through reducing wastage and reprocessing.

Visitors to Manufacturing Solutions 2019 will also learn about how Wogaard's technology enhances overall facility health and safety, reduces the demands of coolant and swarf handling and provides higher swarf value.

Organised by the Limerick Institute of Technology & GTMA, the Manufacturing Solutions conference is dedicated to enhancing how manufacturing businesses work. This is very much what Wogaard's technology is about too - and why it is trusted by companies like Renishaw, Mettis Aerospace and Houghton Oils. It will be the third time that Wogaard has exhibited at the event. Jason Hutt, Managing Director of Wogaard, said:

"We are very proud to attend the event as our goal is to support the manufacturing industry. We're all about reusing, recycling and reducing the usage and cost of neat oil and coolant so it's great to be able to share this at Manufacturing Solutions 2019. It's a great show and I can only see it getting bigger and better every year! We will be at Stand 6 and we look forward to catching up with clients and making new connections through the event."

The company will be exhibiting alongside its long-standing partner, Houghton International, a global leader in delivering advanced metalworking fluids and services for the automotive, aerospace, metals, mining, machinery, offshore and beverage industries.

**Tomas Moriarty, General Manager** from Houghton plc (Ireland), commented:

“We are delighted to be exhibiting at Manufacturing Solutions 2019 with our partner, Wogaard. We recognise this event as an excellent opportunity to highlight solutions that increase productivity, reduce operating costs and improve product quality to companies across many areas of manufacturing.”

Saving costs, reducing waste and addressing environmental responsibilities is something every manufacturer wants to achieve. A visit to Wogaard’s stand at Manufacturing Solutions 2019 is the ideal opportunity to discover how to do that more easily and affordably.
